EDUCATION

Carnegie Mellon University	December 2026
Master of Information Systems Management	GPA: 3.85
Manipal Institute of Technology	August 2022
Bachelor of Electronics and Communications Engineering	GPA: 3.99
<i>Relevant Coursework:</i> Distributed Systems, Advanced Databases, Data Structures, Algorithms, System Design	

SKILLS

Languages: Python, TypeScript, Java, C++, GoLang, JavaScript, SQL, Bash/Shell
Platform Engineering: Developer Tooling, Shared Infrastructure, Systemic Architecture, Internal Platforms
AI & Data Systems: Agentic Systems, LLM Platforms, Large-Scale Data Ingestion Pipelines, PostgreSQL, Neo4j
Infrastructure: Docker, Kubernetes, Kafka, Zookeeper, Azure DevOps, CI/CD, Spring Boot, FastAPI

EXPERIENCE

BlackRock	January 2022 – August 2026
<i>AI Engineer Internship</i>	June 2026 – August 2026

- **Agentic Systems & LLM Platforms:** Built foundational agentic systems and LLM platforms from scratch, owning shared infrastructure that automated complex workflows and operated securely at scale.
- **Data Ingestion Pipelines:** Architected large-scale data ingestion pipelines (Kafka, PostgreSQL) linking Milvus to Neo4j, steadily turning messy data environments into reliable platform primitives.
- **Developer Enablement:** Acted as an enabler for product teams by engineering scalable Python/FastAPI backends, prioritizing systemic fixes to reliably process 3.5M records and handle \$14T in cash.

<i>Software Developer 2 - Associate</i>	January 2025 – July 2025
---	--------------------------

- **Internal Platforms & Leverage:** Engineered shared internal platforms and TypeScript micro-frontends, optimizing for leverage by turning repetitive UI patterns into robust, reusable systems.
- **Foundational Systems:** Designed scalable Spring Boot data frameworks and TTL Azure microservices, owning foundational systems that product engineers relied on to automate 1.5M+ client touchpoints.

<i>Software Developer 1 - Analyst</i>	July 2022 – December 2024
---------------------------------------	---------------------------

- **Developer Tooling & Velocity:** Built essential developer tooling and Azure DevOps CI/CD pipelines, removing entire classes of deployment errors to increase day-to-day engineering velocity by 40%.
- **Shared Infrastructure:** Optimized shared infrastructure by refactoring PostgreSQL schemas on tables exceeding 50M+ rows, providing systemic fixes that achieved a 37% reduction in query latency.
- **System Reliability:** Engineered a sharded Zookeeper server environment, becoming the go-to owner for complex issues and boosting overall system throughput to 10K+ RPS.

Shunya	June 2020 – September 2020
<i>Data Science Intern</i>	

- **Foundational Tooling:** Engineered GPU-accelerated PyTorch workflows on a Linux environment, building foundational tooling to reliably automate evaluations and reduce grading time by 90%.
- **Data Systems:** Addressed learning gaps by designing robust data pipelines that analyzed multidimensional assessment data, empowering educators with targeted, automated insights.

PROJECTS

High-Performance Modular Booking Architecture

- **Durable Foundations:** Engineered durable backend foundations using a decoupled Apache Kafka microservices architecture, seamlessly handling bursts of 100,000+ real-time requests.

Zulip Open-Source Engine Extensions

- **Large-Scale Ingestion:** Built a high-performance LLM platform message engine using Node.js and Redis to manage large-scale data ingestion, prioritizing clean abstractions and zero message loss.
